

WATS1020 Final Project

As my final project I would like to build a quiz website. My site will consist of a map of the United States, Audio recordings, and a quiz box. The idea is to play the recording of speakers from different parts of the United States and have users take a quiz on the region/state they believe the speaker is from.

Resources:

- 1) Bootstrap
- 2) U.S. Map jQuery <https://newsignature.github.io/us-map/#usage-style-options>

The UI will involve the user listening to the audio and then making a selection. When the user makes a selection, a radio button, the corresponding state will illuminate on the U.S. Map jQuery. After the selection is made the user will see that they are correct or the correct state/radio will highlight. The idea of this project is to eventually scale to add more sound files and so that users responses can be recorded in a database and then looked at for a correlation of users perceptions of speech and biases.
